## Denitrol®

Without Denitrol  
With Denitrol

Living  
bacteria,  
**+4°/+35°C**  
store at

**Application:** Before the first application, use JBL Biotopol and allow it to work for one hour. Switch off UVC water clarifiers and ozonizers for 48 hours. Ensure a constant and evenly distributed water temperature.

**Shake before use!**

### Dosage (based on the water volume of the aquarium):

For fresh- and saltwater aquariums, turtles and shrimp.

When setting up an aquarium or after disease treatment: 10 ml per 20 l.

For a partial water change: 10 ml per 300 l

Please use a double dose in saltwater.

Overdosage does not lead to further problems.

### This is how JBL Denitrol works:

- Cleansing bacteria with various heterotrophic and autotrophic strains detoxify the water by breaking down proteins, ammonium, ammonia and nitrite.
- The cleansing bacteria's special enzymes break down fish excrements and other wastes.
- Start-up support for the biological balance of the aquarium.

**New aquariums can immediately be stocked with 1 cm fish per 2 litres of water after adding JBL Denitrol. After 14 days the fish stock can be increased.**

Best before: see lower part of bottle.
