

UK Nano tropical almond leaves

Natural water conditioner

For nano aquariums

- Natural water conditioner and mucous membrane protection by replicating the natural habitat of our aquarium inhabitants.
- Promotes well-being and healthy shedding in prawns.
- Tannins prevent disease.
- Natural decorative material, particularly good in nano aquariums.
- Welcome natural additional food for dwarf crayfish and shrimps.
- Vital for the care and breeding of Betta species.
- Harvested straight from the tree, cleaned, flattened and sun-dried.

Instructions for use:

Add directly to the aquarium, using 1 leaf per 15 - 30 l water. The leaf sinks to the floor after one to two days. The effective ingredients are released over one to three weeks. At this point, a new leaf can be added. The old leaves can be removed or left in the aquarium as a food supplement for dwarf crayfish and shrimps.

Unlimited shelf-life if stored in a dry place.

Variations in size, colouring and shape are natural and not a defect.

Contents: 10 leaves
