

pH-Minus

DE Dosierung: Immer auf gesamten Aquarieninhalt:

UK Dosage: Always for the total aquarium content:

pH	Dosierung / Dosage
> 8	10 ml / 40 l
7 - 8	10 ml / 80 l
< 7	-

UK pH-Minus

■ pH- /CH-reducer

The optimum pH level for most freshwater fish and plants is in the neutral range around 7. JBL pH-Minus reduces excessively high pH levels as well as the carbonate hardness in the aquarium. This is necessary in areas with high CH. Natural oak extract promotes the health of the fish.

Use: Dose according to the amounts stated on the dosage cap. Mix the water thoroughly after every application of JBL pH-Minus. If required, a further dose can be given after 24 hours. The pH level and CH should be checked before and after each application of JBL pH-Minus e.g. using the JBL pH Test Set 3,0-10 and JBL CH Test Set.

Tip: We recommend the JBL PROFLORA CO₂ Sets for long-term, gentle pH reduction.
